

IT'S FLU SEASON

For many suffering from the flu, staying at home, drinking fluids, and taking acetaminophen is all that they need. When conditions become more severe, you may need additional help. The chart below provides a guide of when additional treatment may be necessary.

What puts me or my child at high risk?

I didn't get a flu shot.

I'm 65 or older.

I'm younger than 5.

I have asthma.

I have COPD.

I have diabetes.

I'm pregnant.

I smoke.

I have heart disease.

I have kidney problems.

I have liver problems.

I have trouble fighting infections.

I have cancer.

Do I have the flu?

I feel great!

Runny or stuffy nose

Sore throat

Chills

Mild body aches

Cough

Fever less than 102

Diarrhea/vomiting

Difficulty breathing

Fever more than 102

Dizziness/confusion

Severe body aches

Severe headache

Symptoms improve, but return & worsen.

Does my CHILD have the flu?

My child feels great!

Runny or stuffy nose

Sore throat

Chills

Mild body aches

Cough

Fever less than 102

Diarrhea/vomiting

Fast/difficulty breathing

Fever with rash

Unable to eat

No tears when crying

Not drinking enough fluids

Not waking up or not interacting

Excessively irritable, doesn't want to be held

Bluish skin color

Significantly fewer wet diapers than normal

Symptoms improve, but return & worsen.

What should I do?

Get a flu shot.

Many of our doctors offer online scheduling. Visit MyMidwestPhysician.com to book an appointment today.

Check in with your doctor.

Don't have one? Visit MyMidwestPhysician.com to find one near you and make an appointment online!
